

I am learning to jump through a tidy number on the numberline to solve addition problems.

- A. Complete each equation by placing the two numbers you are given on the numberline and jumping from the first number to a tidy number and then to the answer. The first one is started for you.

$$27.89 + \underline{\hspace{2cm}} = 42.3$$

$$16.95 + \underline{\hspace{2cm}} = 63.6$$

$$38.92 + \underline{\hspace{2cm}} = 92.5$$

$$49.88 + \underline{\hspace{2cm}} = 72.4$$

$$51.92 + \underline{\hspace{2cm}} = 69.72$$

$$26.10 + \underline{\hspace{2cm}} = 71.03$$

$$73.14 + \underline{\hspace{2cm}} = 83.14$$

$$48.11 + \underline{\hspace{2cm}} = 81.26$$

- B. Draw your own numberlines in your book and complete these problems.

1. $32.81 + \underline{\hspace{2cm}} = 64.28$ 3. $19.49 + \underline{\hspace{2cm}} = 42.67$ 5. $46.74 + \underline{\hspace{2cm}} = 66.74$
 2. $25.63 + \underline{\hspace{2cm}} = 67.40$ 4. $52.82 + \underline{\hspace{2cm}} = 63.21$ 6. $34.03 + \underline{\hspace{2cm}} = 57.09$
